

## Shiny app: plot mi-hd results

This Shiny app allows you to interact with the results in the study [“High-dimensional imputation for the social sciences: a comparison of state-of-the-art methods”](#).

### 1. Installing the Shiny app as an R package

You can install the Shiny app from the local zipped folder by:

1. Download zipped directory called “mihd.results”.
2. Unzip the folder.
3. Open an R session, and run the following command.

```
install.packages(  
  "path to the folder containing the package",  
  repos = NULL,  
  type = "source"  
)
```

For example, on a Windows computer, this could be

```
install.packages(  
  "C:/Users/Name/Downloads/mihd.results/",  
  repos = NULL,  
  type = "source"  
)
```

### 2. Using the Shiny app

To start the shiny apps and interact with the plots, open an R session and load the package:

```
library("mihd.results")
```

Then, run the following command in the R console:

```
start_app()
```

The app interface will explain how to interact with it.
